

4.2.10.1 Overview

The programme equips students with advanced knowledge in materials science and engineering, and is committed to the highest quality in teaching and learning by professors from various disciplines in Science and Engineering. The MSc (Materials Science and Engineering) programme aims to create leaders and provide expertise in the fast-growing field of materials engineering by offering foundation courses, as well as up-to-date advanced courses in areas ranging from metallic, organic, and inorganic materials to state of the art semiconductor materials. Students of the MSc (Materials Science and Engineering) programme are trained to be spirited, self-reliant, open and egalitarian.
