1 Faculty's Commitment

Building upon more than 60 years of experience in research, training and practice in epidemiology and public health, the Saw Swee Hock School of Public Health (SSHSPH) was established in October 2011 as Singapore’s first and only full-fledged national public health tertiary education institution. The School is also a member of the National University Health System (NUHS).

The School is designed around domains which build upon strengths of the School and recognise opportunities in: Epidemiology; Biostatistics & Modelling; and Health Systems & Behavioural Sciences. The School aims to continually foster healthier communities in Singapore and the region, and impact public health programmes and policies through its robust educational programmes and translational cross-disciplinary research work on cohort studies and life course epidemiology, infectious disease research, health technology assessments, health promotion, workplace safety and health, health systems evaluation and health services research. An interdisciplinary approach, augmented by rigorous training, applicable research and regional partnerships, places SSHSPH at the forefront of public health knowledge discovery and practice in Asia.

Today, SSHSPH continues to offer the MPH degree to student cohorts from multiple disciplines. In August 2012, the Master of Science (MSc) and Doctor of Philosophy (PhD) programmes were launched to build upon SSHSPH’s strong research base. For undergraduate teaching, SSHSPH faculty teach in the NUS Yong Loo Lin School of Medicine curriculum, exposing medical students to the complexity and value of community and public health through student-driven Community Health Projects (CHP). The launch of the Minor in Public Health in AY2013/2014 provided the opportunity for all other NUS undergraduate students to be exposed to public health issues and its determinants combined with approaches and methods targeted at prevention or alleviation.
