802.1x Configuration Guide for Mac OS X 10.8

1. This guide applies to users using Mac OS X 10.8 with 802.1x enabled network.

2. Users have to connect the MAC OS PC to the 802.1x enabled network. Network authentication dialogue box will be automatically opened upon network connection.

3. Type in valid user credentials
   - **Username**: (Enter your “Domain\Username”)
     (E.g. of Domain: NUSSTF/NUSSTU/NUSEXT)
   - **Password**: (Enter your Password)

Then click **OK**
4. **Verify Certificate** dialogue box will then appear for user to verify their security certificate.

Click on **Show Certificate**

5. Verify that the correct security certificate (auth01.nw.nus.edu.sg) has been used.

Then click on **Continue**
6. Enter valid Username and Password to have the administrative right to make changes to the Certificate Trust Settings.

![Password Dialog]

7. Click **Update Settings** to gain network access.

**Disable 802.1x authentication function on Mac OS X 10.8**

8. Click on Mac OS Start menu. Choose **System Preferences** from the pull down menu.
9. Click on **Network** under Internet & Wireless system preference.

10. Choose **Ethernet** option from the list. Then click on **Advanced...**
11. Click on **802.1X** option tab. Uncheck **Enable automatic connection**

Click **OK** and 802.1X function will be disabled.
